Executive Summary

Following our review we have identified the following:

Priority Areas to Address Health Check xxx

- xx

Barriers to Realising Investment

- xxxx

Key Recommendations

- xxxx

Next Steps Support Plan

Following the findings and recommendations of the Health Check, these have been the agreed actions with the client to implement changes required.

Training Options:

Options	Comments
Internal Admin Ownership	
Consultant Support	
Salesforce Premier Success	
Salesforce Trailmix	

Further Support Options

Consultancy	Salesforce
	Trailhead provides a lot of online learning resources to support your priorities. We have put together the recommended Trailmix for your organisation: URL to be added

Technical Support Options:

Consultancy	Salesforce
	Premier Success provided by Salesforce is recommended where there is a dedicated salesforce administrator who is proven to be resourceful and eager to take on the system development themselves and don't require hands-on support or training. To find out more you can complete the following trail https://trailhead.salesforce.com/en/content/learn/trails/achieve-your-goals-with-success-cloud

Activities Undertaken

Review undertaken by:

Activities (Amend as applicable)	Summary	Status
Business Analysis Consultation	2hrs consultation with admin Indepth consultations with team members	
	Organisational Review	
	Organisational Drivers/Motivational Factors for CRM	
Product and User Adoption Review	Organisation-wide Adoption of CRM – Technical Audit	
	User Adoption Appraisal	
	Install of User Adoption Dashboard	
	Product and Feature Appraisal	
System Governance and Management Review	Governance and Management Review	
	Salesforce Management Appriaisal	
	Optimizer Report	
	Security Health Check Report	
	NPSP Health Check Report	
	Error Handling	
Data Governance and Management Review	Assessing How Organisation Users Data	

	Assessing Data Quality Activities
	Install Data Quality App from App Exchange
	Install Field Footprint
	Set Up or Install Duplicate Management Tool
Recommendations Consultation	2hrs virtual presentation with salesforce admin (free health check) Indepth presentation and training with team members (paid health check)
	Product and User Adoption Plan Discussed
	System and Governance Plan Discussed
	Data Management Plan Discussed
	Next Steps Action Plan Discussed

Organisational Review

Within this section we want to understand the nature of organisation and the original objectives and motivations for implementing the CRM. We want to establish the progress towards these goals and the perceived challenges and successes to date to establish priorities for this Health Check Review.

Summary of Organisation

xxx

Review Area	Comments
Vision/Mission Statement	Text
Stakeholders	
Team (Type of Team Quantity of Users/Roles etc)	
Geographical Spread of Clients/Team	
Projected Financial Growth and Budget allocated to system	
Target Sectors/Clients

Product and User Adoption Review

Within this section we want to understand the current usage of salesforce across the organisation and relevant users to understand which users/teams are using Salesforce well and which aren't. We will appraise the different Salesforce products and features that are being used within the instance and dependent on the level of business analysis that is conducted (for a free health check this is limited versus a paid-for health check with stakeholder workshops) we will determine and advise on whether there are benefits to be gained from maximising more of the features available.

We look to support the organisation to work towards a connected 360 organisation with reduced data silo's and multiple systems which reduces efficiency, business performance and customer service.

This section is informed by a discussion with the Salesforce Administrator alongside install where needed of the Salesforce Adoption Dashboard

Organisation-wide Adoption of CRM – Technical Audit

FUNCTION (amend as applicable)	Using Salesforce or Integrated Tool	Products Used Salesforce/Third Party App / Other	Level of Use	ADDITIONAL NOTES BETWEEN CURRENT AND NEW SYSTEM
Marketing	Yes/No	e.g. Pardot/ Campaign Monitor	High /Medium / Low	
Sales /Fundraising		e.g. Sales Cloud/NPSP		
HR		e.g. App or Custom		
Contract Management		e.g. Sales Cloud/Custom		

Financial	e.g. Integration with Sage
Membership Management	e.g. Sales Cloud/NPSP/Custom
Impact Reporting	e.g. Product or Custom
Volunteer Management	e.g. Volunteers for Salesforce or App
Customer Service / Helpline	e.g. Service Cloud
Other	

Salesforce Adoption Appraisal

Overview	
No of Years Using Salesforce	
Contact Management Set Up	Person Accounts / Contacts and Accounts / NPSP
No of Contacts /Accounts Records	
Total No of Users	
User Adoption KPI's	
Total No of Employees	
% of Employees Using Salesforce	
% of Users Logging in Last Month	

% of Users Logging in Last Six Months
High Adoption, High Value: Teams that are using Salesforce as a business-critical tool
High Adoption but Low Value: Teams getting value out of Salesforce, but not yet using CRM to its full potential
Low Adoption and Low Value: Teams getting minimal value from Salesforce, with correspondingly low adoption.
No Adoption: Teams that are not actively using Salesforce

Product and Feature Review

Product	Level of Use	Recommendations
Sales Cloud	NIL/LOW/MEDIUM/HIGH	
Service Cloud		
Communities		
Non Profit Success Pack		
Volunteers for Salesforce		
Pardot		
Marketing Cloud		
Custom App Development		

Third Party Apps
Integrations

Within this section we audit the relative use of the features of the three main products available. With a free health check we determine the use of these features during our initial consultation and desk research. With this approach the level of use is based on face value and it is difficult to determine the relative value of features not currently used for the organisation to make any informed recommendations. If additional budget is assigned for business analysis our approach would be to consult directly with different teams to discuss their current internal processes and to assess where Salesforce is currently supporting this process and where value could be obtained from maximising other features that are currently not being used. Based on this deeper elicitation we can normally determine if additional features would support business and efficiency objectives and provide an informed recommendation.

System Governance and Management

Managing Salesforce is a team effort and involves buy-in from all levels of the organisation to support ongoing success. Within this section we review what support you currently have in place to support the ongoing planning, management and maintenance of your salesforce system to reduce user frustration and poor adoption.

We have summarised the key elements in the diagram below.

Recommended Resource: Trail on Governance Basics <https://trailhead.salesforce.com/content/learn/modules/governance-basics>

Review Area	Explanation
CRM Strategy & Action Plan	The CRM Strategy clearly outlines the business case and metrics that the CRM is expected to support with stages of implementation and justification for investment. It should provide the record of decision making with detailed road map and deliverables agreed.
Centre of Excellence	A Centre of Excellence is a group of individuals who are responsible for the CRM Strategy, managing governance and setting and evaluating the metrics of success. To achieve success, they are responsible for allocation suitable resources and helping to determine priorities for investment and time of the technical team. Within this Centre of Excellence should be:

	The Executive Sponsor is the leader for the COE representing the business ambassador. The Salesforce Technical Admin/Team. Senior representatives who are responsible for sponsorship, compliance and/or adoption of Salesforce CRM within their department or cross-departments. A representative in charge of delivering a Change Management strategy
In-House Salesforce Administrator/Team	The Salesforce Admin Team are responsible for ongoing management of the Salesforce system in regards to overseeing everyday change requests, training, user adoption (see next section). They are responsible for managing the internal support desk for capturing and managing user requests. Depending on the size of the organisation this maybe one person, a team or dependent on external consultants.
Support Desk	Setting up a Support Desk to capture requirements, prioritise, track status and project manage deliverables is an important task of a Salesforce Administrator. It helps provide visibility on where time and investment has been prioritised to feedback to users, champions and the executive committee.
Agile Project Management	Agile Project management is a method that enables you to manage iterative development within your salesforce system and to help decision makers prioritise and decide on which requirements should be completed within the time and budget available. Here is a recommended Trail on running an Agile Team https://trailhead.salesforce.com/en/content/learn/modules/salesforce-agile-basics
Salesforce Champions	Salesforce Champions are Departmental Representatives who are active users of salesforce with potential delegated admin responsibilities. They are responsible for liaising with their team members, understanding what Salesforce is capable of and feeding back on change requests or new requirements to the Salesforce Admin and upwards to the Centre of Excellence if it requires a certain level of investment and time. The Champion Team activities could be facilitated through monthly meetings, chatter group or project management tool.
Business Analysis	Ongoing Business Analysis should be undertaken with teams to understand and appraise the performance of Salesforce to meet their needs in response to changing business conditions and new technical features available. This process should be managed professionally and could be delivered by consultants, the in-house administrator or the champions. We would recommend that a formal and consistent approach to eliciting and documenting requirements is consistent across the organisation and managed properly to support change management. Users want to feel listened too, requirements need to be agreed and prioritised and users want feedback on what they have requested with an understanding on whether it will happen and within what time frame. Here is a recommended Trail on Innovation and Business Analysis https://trailhead.salesforce.com/en/content/learn/trails/innovation_salesforce_way

Learning /Training Resources

Providing ready access to up-to-date training support, documents, videos, trailmixes and process maps is important to support users to use the system, and resources must be updated as and when changes are made to the system. Whether it's within an LMS system, Files, Knowledge or alternative storage area, it's worth reviewing if training resources are available and relevant to the users still. Here is a recommended Trail on Empowering Salesforce Users
<https://trailhead.salesforce.com/en/content/learn/trails/empower-your-salesforce-users>

System Governance Review

System Governanance and Support	Current Status	Future Recommendations
CRM Strategy		
Center of Excellence		
Salesforce Admin/Technical Team		
Support Desk		
Agile Project Management		
Salesorce Champions		
Business Analysis		
Learning/Training Resources		

Salesforce Management Appraisal

The internal administrator is usually responsible for four areas so within this section we want to review with the Salesforce administrator their awareness and knowledge of these areas and who currently takes on the following tasks across

- Security Management
- System/User Management
- Data Management
- CRM Road Map

We have created the following table to advise on the various tasks that an administrator may undertake on a timely basis.

Recommend Resource: To get a full understanding of the four roles of a Salesforce administrator, watch our webinar here:

<https://www.youtube.com/watch?v=UwgfaGff7bo&t=23s>

Admin Checklist	Daily/Weekly	Monthly	Quarterly
Cyber Security		X	
User Management	X		
GDPR Compliance		X	
Health Checks			X
Error Handling	X		
Support Desk	X		
Duplicate Mgmt	X		
Data Validation			
Data Cleansing		X	
Business Analysis			X
Salesforce Products			X
Learning and Sharing			X

The benefits of having a dedicated internal administrator for the CRM is as follows:

- Ensuring the system and data is secure and compliant for Cyber Security and GDPR.
- Ensuring the system is up to date and users are supported and trained to use the system confidently and change requests are implemented as needed.
- Ensuring the CRM contains clean and valid data and business rules are followed.
- Ensuring the team are aware of the functionality and system continues to evolve to meet needs taking advantage of new releases and products as needed.

Salesforce Admin Task	Current Status	Future Recommendations
Cyber Security – Security Health Check		
User Management		

GDPR Compliance – Consent Management
Optimiser and NPSP Health Checks
Error Handling and Critical Updates
Support Desk Tools
Duplicate Management
Data Validation
Data Cleansing
Business Analysis
Salesforce Product Knowledge and Latest Release Application
Learning and Sharing Activities

Health Check Reports

Salesforce Optimizer Report

Salesforce provide a Salesforce Optimizer Report that undertakes a self-assessment of the system to advise on aspects that need to be undertaken. As part of the Health Check we will generate this report and install the related App.

Recommended Resources: Trail <https://trailhead.salesforce.com/content/learn/modules/salesforce-optimizer>

The Optimizer Report will look at field usage, no of admins, no of triggers, level of automation and use of mydomain alongside other areas and provide recommended updates. As part of this Health Check we will identify high priority areas and provide recommendations. We have identified the following areas that need attention.

Area of Attention	Level of Priority	Comments
	HIGH/MEDIUM/LOW	Text

Security Health Check

Salesforce provides a Health Check tool to evaluate security set up on your system and identifies critical and compliant areas. We will run this report and flag the areas that need immediate attention

Recorded Score:

Area of Attention	Level of Priority	Comments
-------------------	-------------------	----------

HIGH/MEDIUM/LOW Text

NPSP Health Check

The NPSP has it's own health check report which allows us to see the current performance of your NPSP features.

Area of Attention

Level of Priority

Comments

HIGH/MEDIUM/LOW Text

Error Handling

Within this section we will review how you detect and manage any errors that occur in the system

- Ongoing management considerations include having a central admin user account that is used for configuration and notifications for errors
- Channel error alerts to a central email address that can be accessed/reviewed by relevant team members
- Track and manage error alerts like cases between a team

Check	Details
Check that NPSP is capturing errors	NPSP Settings > Error Notifications
Check NPSP Error Logs	NPSP Settings > Error Logs
Check for Apex errors	Setup > Apex Jobs - check for jobs which haven't completed successfully
Duplicate Errors	Setup > Data Management > Duplicate Error Logs

Area of Attention	Level of Priority	Comments
-------------------	-------------------	----------

HIGH/MEDIUM/LOW Text

Data Governance and Management

One of the biggest reasons why CRM's are adopted by users is because they don't trust the data. Poor data governance can impact the organisation significantly*:

- Inaccurate or incomplete data can lead to 20% stalled productivity, which is one day of work each week.
- The average company loses 12% of its revenue as a result of inaccurate data.
- Forty percent of all business initiatives fail to achieve their targeted benefits because of poor-quality data.

Bad data is consistently linked with:

- Lost revenue
- Missing or inaccurate insights
- Wasted time and resources
- Inefficiency

Good data lets your organisation:

- Prospect and target new customers
- Identify cross-sell and upsell opportunities
- Gain account insights
- Increase efficiency

- Slow info retrieval
- Poor customer service
- Reputational damage
- Decreased adoption by reps

- Retrieve the right info fast
- Build trust with customers
- Increase adoption by reps
- Plan and align territories better
- Score and route leads faster

Recommended Resources

- *Data Governance PDF https://a.sfdcstatic.com/content/dam/www/ocms-backup/assets/pdf/misc/data_Governance_Stewardship_ebook.pdf
- Data Quality Trailhead https://trailhead.salesforce.com/content/learn/modules/data_quality
- Duplicate Management Trailhead https://trailhead.salesforce.com/content/learn/modules/sales_admin_duplicate_management

Summary of how the Organisation Uses Data

What are the business objectives

What customer data is required to support those objectives

How are they currently using that customer data

Where is the customer data stored

Business Objective	Departments	Necessary Data
e.g Advertise new services	e.g Marketing	e.g. Name, Company, Email, Address, Phone, Industry, Number of Employees, Annual Revenue

Assessing Data Quality

Salesforce recommend the following approach to assessing data quality:

Approach	Approach to Assessment	Approach to Review
Age	What was the last time each record was updated?	Run a report on the Last Modified Date of record to review what percentage of records have been updated recently.
Completeness	Are all key business fields on records filled in?	Identify the fields required for each business use and run a report that shows the percentage of blanks for these fields. Install data quality appS from AppExchange. https://appexchange.salesforce.com/listingDetail?listingId=a0N300000016cshEAA https://appexchange.salesforce.com/listingDetail?listingId=a0N30000000puBxEAI Identify which fields are being used regularly and those which aren't used, by installing third party app FieldFootprint https://appexchange.salesforce.com/listingDetail?listingId=a0N3A00000EShrRUAT
Accuracy	Is your data as accurate as possible? Has it been matched against a trusted source?	Do any records need to be matched against a trusted source and are any Apps used? E.g. Postcode
Consistency	Is the same formatting, spelling, and language used across records?	Run a report to show the values used for date, currency, state, country, and region fields to identify how many variations are used for a single value.
Duplication	Are records and data duplicated in your org	Identify duplicate assessment rules and criteria e.g. email address or NI number and use the Duplicate Management features in Salesforce or install a duplicate detection app from AppExchange.
Usage	Is your data being harnessed in reports, dashboards, and apps?	Review the available reports and dashboards used against potential data in the system. Are you optimizing data use?
Cleansing	Is data being deleted that is no longer required in the system.	Clarity data cleansing/data deletion policies and assess whether data cleansing has been completed via reports and dashboards.

DATA GOVERNANCE AND MANAGEMENT SUMMARY

Age		
Completeness		
Accuracy		
Consistency		
Duplication		
Usage		
Cleansing		

Data Management Plan

We would recommend:

Clear business rules are agreed by your team and communicated during Training about which data is collected and required in the system at different stages of the customer journey. To support compliance with these business rules we would recommend harnessing some of the features below which would be documented within a Data Management Plan. A typical data management plan includes standards for creating, processing, and maintaining data.

To support data management here are some recommendations you could take forward.

Data Standard	Description	Example
Naming	Set naming conventions for records. Always include suffixes (Inc., Corp.)? Abbreviations?	Make sure that company names are never abbreviated except when the abbreviation is the standard name.
Formatting	Figure out how dates and money are represented.	Use dd/mm/yyyy for all date formats.
Workflow /Flows	Determine processes for record creation, reviewing, updating, and archiving. Determine all the stages a record goes through during its life cycle.	Create a flow script for customer management which only shows the fields that need to be completed during each stage of the journey. Route leads directly to the right record owner based on criteria in the system.
Security and Permissions	Determine the appropriate levels of privacy for data. Make sure to comply with regulatory, legal, and contractual obligations.	Make sure that team members can view confidential information on their leads.
Monitoring Reports and Dashboards	Outline a process for ensuring quality control of data. Determine the frequency, scope, owners, and checks, including ways for updating data, preventing duplicates, merging records, adding records, and archiving records. Determine metrics that can be easily monitored in a dashboard.	Determine what good quality data looks like with your team to understand the exact KPI's to review and determine good quality data.

Paths	Provide clarity/guidance to users about what data to input during each stage of a customer journey by using Paths on the object.	Sales Path is a great example. For each stage of the customer sales cycle document the fields that need to be completed in the Sale Path. This can be replicated for any object where there are clear stages.
Required Fields	Make sure fields are required that support your business objectives.	Any fields that may show in reports and dashboards should be completed and may required.
Validation Rules	Set up validation rules for any field. Then, when records are saved, the data is checked to make sure that it follows the format.	Want to make sure that phone numbers follow a particular format? For example, to make a standard field required, you can use a validation rule that checks to see if the field is blank. You set up validation rules for phone, credit card, and customer ID fields. You also set up validation rules to make standard lead contact info fields required.
Page Layouts	Remove fields them from the page layout for team members that don't need or use them and put the most important, required fields at the top.	Create customized page layouts for team members, to give them the fields they need when they need them.
Data Enrichment Tools	Data is obsolete almost as soon as it's entered. That's why it's important to regularly match your data against a trusted source.	https://appexchange.salesforce.com/collection/data
Duplicate Management	Identify duplicate identify rules and determine the best approach for identifying new ones or managing existing ones. This could be using the native Duplicate Management tool or a third party app.	For example duplicate rules could be based on one or more criteria email address, phone number, name or postcode? How and when do duplicates need to be identified and who is responsible for managing them.
Custom Field Types	Create Custom Field Types to help standardise data collection where data is inconsistent and can't be analysed	Set up custom picklist fields for State and Country. Use the same standard approach for data and currency fields etc.
